# 24-Port Blank Patch Panel - Modular

"Feature Sheet"

P/N: 20-5024

The DataComm 24-Port Blank Patch Panel (20-5024) is a versatile, rack-mountable solution designed to organize and future-proof your network infrastructure. This blank patch panel provides 24 available port positions, giving installers the flexibility to populate the panel with keystone jacks or adapters tailored to specific project needs. Ideal for structured cabling systems in commercial and residential environments, this panel delivers a clean, professional appearance while keeping your network terminations accessible and well-managed.

Whether you are building out a structured wiring closet, upgrading an existing network rack, or planning for future expansion, the 24-Port Blank Patch Panel offers a customizable backbone for voice, data, and multimedia cabling.

Key Features:

- 24 modular port openings – flexible space to install keystone jacks of choice
- Blank panel design – populate only the ports you need
- Standard 19″ rack mount – fits most network racks and enclosures
- Durable steel construction – rugged and road-worthy
- Professional cable management – clean, organized network termination point
- Ideal for structured cabling systems – voice, data, fiber, and AV installations
- Customizable configuration – supports Cat5e, Cat6, fiber, audio, HDMI keystone inserts
- Powder-coated finish – professional look and long-lasting durability
